

Arranging Equations to $y = mx + b$ Form.

Examples...

1. $3x + y = -4$

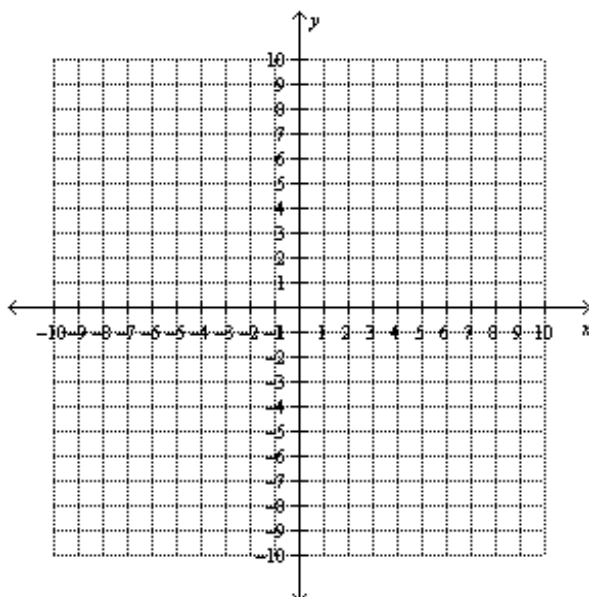

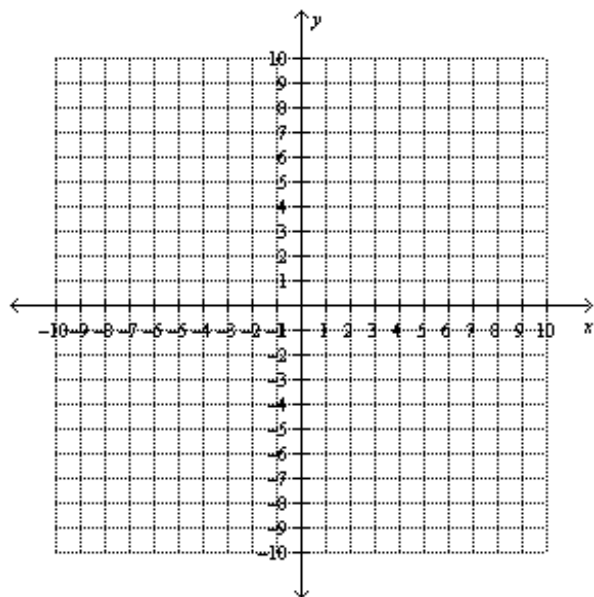

2. $4x - 2y = 10$

Now you try...

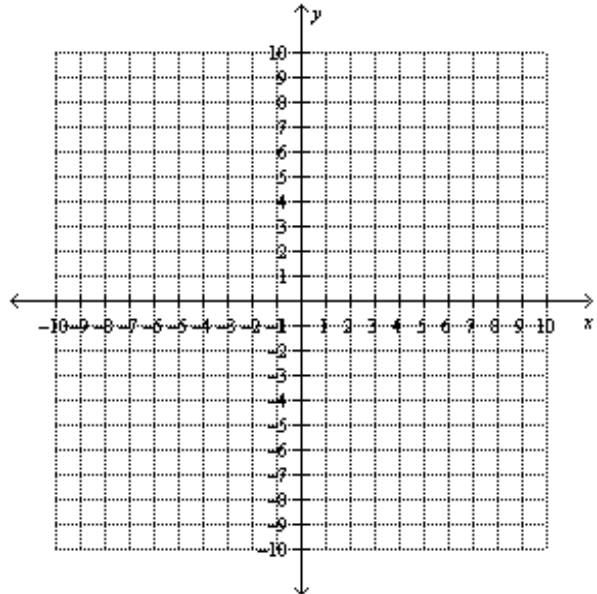

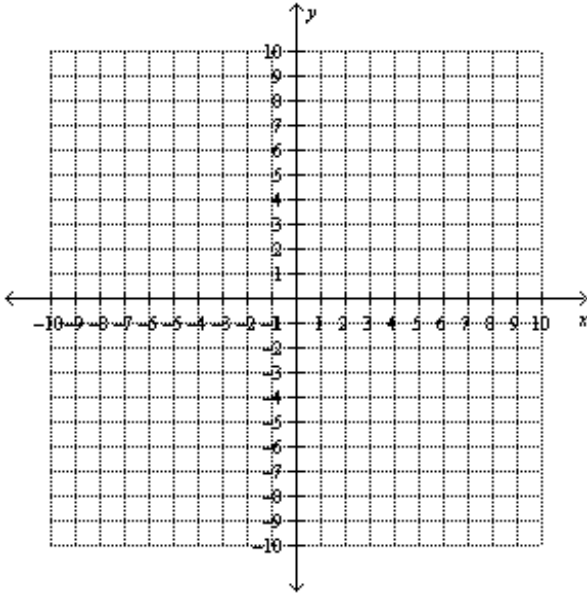

1. $2x + y = 8$

2. $-3x + y = 6$

$$6x + 2y = 8$$

$$4. \quad 6x - 3y = 12$$

$$5. \quad 4x - 6y = 12$$

$$6. \quad 2x + 2y = 6$$
