

Practice 7–4 Answers

1.) Let $x = \#$ of 2–point problems and $y = \#$ of 5–point problems

$$\begin{array}{rccccccc} \# \text{ of 2–point problems} & & \text{AND} & \# \text{ of 5–point problems} & \text{IS} & \text{Total \# of problems} & \\ x & & + & y & = & 38 & \end{array}$$

$$\begin{array}{rccccccc} \text{Points from \# 2–point problems} & & \text{AND} & \text{Points from \# 5–point problems} & \text{IS} & \text{Total Points on Test} & \\ 2x & & + & 5y & = & 100 & \end{array}$$

System of equations: $x + y = 38$ and $2x + 5y = 100$ Answer: (30,8) which means that there are 30 problems that are 2–point problems and 8 problems that are 5–point problems.

2.) Let $x = \#$ of houses and $y = \$$ (Expenses & Income)

$$\begin{array}{rccccccc} \text{Expenses} & \text{IS} & \$4 \text{ per house} & \text{AND} & \$\$ \text{ spent on supplies} & & \\ y & = & 4x & + & 315 & & \end{array}$$

$$\begin{array}{rccccccc} \text{Income} & \text{IS} & \$25 \text{ per house} & & & & \\ y & = & 25x & & & & \end{array}$$

System of equations: $y = 4x + 315$ (Expenses) and $y = 25x$ (Income) Answer: (15, 375) which means they needed to clean 15 houses in order to break even (Spend \$375 & Make \$375).

3.) Let $x = \$$ Cost of a Case Juice and $y = \$$ Cost of a Case of bottled H₂O
Baseball Team:

$$\begin{array}{rccccccc} \text{Cost of Cases of Juice} & \text{AND} & \text{Cost of Case of bottled H}_2\text{O} & \text{IS} & \text{Total Cost} & & \\ 6x & + & y & = & 135 & & \end{array}$$

Softball Team:

$$\begin{array}{rccccccc} \text{Cost of Cases of Juice} & \text{AND} & \text{Cost of Case of bottled H}_2\text{O} & \text{IS} & \text{Total Cost} & & \\ 4x & + & 2y & = & 110 & & \end{array}$$

System of equations: $6x + y = 135$ and $4x + 2y = 110$ Answer: (\$20, \$15) which means that it cost \$20 for a Case of Juice and \$15 for a Case of bottled H₂O.

4.) Let $x = \#$ of minutes on aerobics (per week) and $y = \#$ of minutes weight training (per week)

$$\begin{array}{rccccccc} \# \text{ of minutes on aerobics (per week)} & \text{AND} & \# \text{ of minutes weight training (per week)} & \text{IS} & \text{Total min.} & & \\ x & + & y & = & 330 & & \end{array}$$

Ratio of aerobics time to time weight training IS six TO Five

$$\frac{x}{y} = \frac{6}{5} \text{ or when simplified } 6y = 5x$$

System of equations: $x + y = 330$ and $6y = 5x$ Answer: (180, 150) which means that she spent 180 minutes on aerobics and 150 minutes weight training during that week.

5.) Let x = # of T-shirts and y = \$\$ (Expenses & Income)

$$\begin{array}{rclcl} \text{Expenses} & \text{IS} & \text{\$3 per T-shirt} & \text{AND} & \text{\$\$ spent on equipment} \\ y & = & 3x & + & \$1,530 \end{array}$$

$$\begin{array}{rcl} \text{Income} & \text{IS} & \text{\$20 per T-shirt} \\ y & = & 20x \end{array}$$

System of equations: $y = 3x + 1,530$ (Expenses) and $y = 20x$ (Income) Answer: (90, 1,800) which means they needed to sell 90 T-shirts in order to break even (Spend \$1,800 & Make \$1,800).

6.) Let x = \$\$ Cost of a Roll of Streamers and y = \$\$ Cost of a balloon

First Trip:

$$\begin{array}{rclcl} \text{Cost of Roll of Streamers} & \text{AND} & \text{Cost of balloons} & \text{IS} & \text{Total Cost} \\ 3x & + & 15y & = & 30 \end{array}$$

Second Trip:

$$\begin{array}{rclcl} \text{Cost of Roll of Streamers} & \text{AND} & \text{Cost of balloons} & \text{IS} & \text{Total Cost} \\ 2x & + & 4y & = & 11 \end{array}$$

System of equations: $3x + 15y = 30$ and $2x + 4y = 11$ Answer: (\$2.5, \$1.5) which means that it cost \$2.5 for a Roll of Streamers and \$1.5 for a balloon.

1. $x + y = 38$
 $2x + 5y = 100$

2. $y = 4x + 315$
 $y = 25x$

3. $6x + y = 135$
 $4x + 2y = 100$

4. $x + y = 330$
 $\frac{x}{y} = \frac{6}{5}$

5. $y = 3x + 1,530$
 $y = 20x$

6. $3x + 15y = 30$
 $2x + 4y = 11$
