## Multiplying and Dividing Powers

Compute what happens when we multiply the following...

| Problem | Factor Out | Standard <br> Notation | Write <br> Answer as <br> a Power |
| :---: | :--- | :--- | :--- |
| $10^{4} \bullet 10^{3}$ |  |  |  |
| $10^{1} \bullet 10^{2}$ |  |  |  |
| $10^{2} \bullet 10^{5}$ |  |  |  |
| $10^{4} \bullet 10^{2}$ |  |  |  |
| $10^{25} \bullet 10^{100}$ |  |  |  |

1. What patterns or short cuts do you notice about this process?
2. What would $10^{\mathrm{m}} \bullet 10^{\mathrm{n}}$ equal?

This property works for powers of any number, not just powers of ten.

## General Rule:

Compute what happens when we divide the following...

| Problem | Write with a <br> Horizontal <br> Fraction | Factor Out | Reduced | Standard <br> Notation | Write <br> Answer <br> as a <br> Power |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $10^{4} \div 10^{2}$ |  |  |  |  |  |
| $10^{3} \div 10^{2}$ |  |  |  |  |  |
| $10^{5} \div 10^{3}$ |  |  |  |  |  |
| $10^{2} \div 10^{1}$ |  |  |  |  |  |
| $10^{32} \div 10^{20}$ |  |  |  |  |  |

1. What patterns or short cuts do you notice about this process?
2. What would $10^{\mathrm{m}} \div 10^{\mathrm{n}}$ equal?

This property works for powers of any number, not just powers of ten.

## General Rule:
