**Finding the Missing Angle**

## Finding the Missing Angle - Using Algebra

Find  $x$

- 
1. The measures of two **supplementary** angles are in the ratio of  $2 : 3$ . Find the measurements of the two angles.
  2. In a pair of **complementary** angles, the measurement of the larger angle is three times that of the smaller angle. Find the measurements of the two angles.
  3. The measure of a **supplement** of an angle is  $6^\circ$  more than twice the measure of the angle. Find the measurement of the two angles.

4. The measurement of the **complement** of an angle exceeds the measure of the angle by 75%. Find the measurement of the angle and its complement.
5. Three adjacent angles are **at a point**. The second angle is  $30^\circ$  more than the first, and the third angle is  $40^\circ$  more than the second angle. Find the measurements of all three angles.
6. Three adjacent angles are **on a line**. The measurements of the three angles are four consecutive whole numbers. Determine the measurements of all three angles.

### Triangle Sum Theorem

All the angles in a triangle add up to  $180^\circ$ .

Find the missing angles.

1.

2.

$\angle A =$  \_\_\_\_\_

$\angle B =$  \_\_\_\_\_

$\angle C =$  \_\_\_\_\_

### Triangle Inequality Theorem

The sum of any two sides of a triangle must be greater than the 3<sup>rd</sup> side.

1. 3, 9, 7

2. 2, 8, 4
